Insects

PREFACE.

THE late MR. WILLIAM CHAPMAN HEWITSON bequeathed his Collection of Butterflies to the British Museum on condition that the Collection should be called the "Hewitson Collection," and should be kept in good order, preservation, and condition, and in the same cabinets and in the same order and arrangement, and under the same nomenclature, as they should be at the time of his decease until the expiration of twenty-one years from that time. Mr. Hewitson likewise directed his Executors before delivery over of his Collection to the Museum, to cause a Catalogue to be made, and certain copies to be printed and circulated at the expense of his Estate, among such Public Museums and Lepidopterists as his Executors should see fit.

In accordance with Mr. Hewitson's directions, the Executors employed Mr. Kirby to prepare the Catalogue previous to handing over the Collection to the Trustees of the British Museum, who have accepted the bequest of the Collection on the conditions named in the Will.

The Collection consists of about 4000 species as arranged by himself, and is contained in seven cabinets, comprising altogether 357 drawers of a large and uniform size. As is well known, Mr. Hewitson allowed great latitude for variation, and many Entomologists would probably consider the Collection to contain a far greater number of species.

In the arrangement, determination of species, synonyms, or occasional indications of new species, Mr. Kirby has simply followed the Collection itself; he has added the names of families, the authorities for the specific names,

Insects

M21234

and such localities as are placed in brackets; in consequence of the specimens in the Collection being imperfectly, or not at all, ticketed with their localities, time would not allow him to determine more than a very few of the unnamed species, but in such cases he has inserted the names in brackets.

The unnamed species are indicated as spaced out in the Collection by Mr. Hewitson; but some of the series of undermentioned *Lycenide*, *Hesperide*, &c., obviously include distinct species, which he would, doubtless, have separated when he came to examine them more closely.

It may be added that the Collection is very carefully named, allowance being made for Mr. Hewitson's views on variation; but the locality labels appear to be incorrect in a few instances.

Apart from the very fine condition of all the specimens, and the rarity of many of the species contained in this Collection, its scientific value is greatly increased by the large number of types which it includes, there being among them, in addition to the many hundreds of species described by Mr. Hewitson himself, those of many species described by Messrs. Wallace, Moore, and others.

June 1, 1879.

CATALOGUE

OF THE

COLLECTION OF DIURNAL LEPIDOPTERA

FORMED BY THE LATE
WILLIAM CHAPMAN HEWITSON.
